

6 REASONS

TO ALIGN HYLAND CONTENT SERVICES WITH YOUR GUIDEWIRE STRATEGY

Like most insurers, you may only see a fraction of the customer information you need to open a new policy or process a claim. By aligning your Guidewire strategy with Hyland content services, you can get a complete view of your customer — and reduce implementation times by almost 50 percent.

That's only one reason to do so. Here are six more:

1

POWERFUL PARTNERSHIP

Hyland is Guidewire's only Solution Connect Partner focused on content services. Our proven integration and close partnership with Guidewire increases the value and reduces the risk of your upgrade.

2001: Guidewire lands its first customer and implements with OnBase for the first time

50%: Amount of implementation time reduced by the OnBase for Guidewire Accelerators

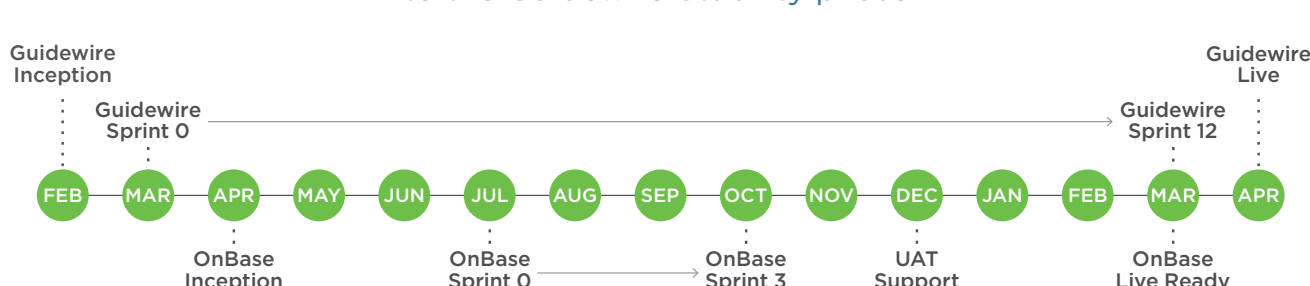

39 and 65+: Hyland has 39 Guidewire InsuranceSuite® customers with 65+ successful integrations

2

RUNNING ON DAY 1

Reduce CORE customization and increase out-of-the-box capability day one by implementing Hyland's OnBase alongside Guidewire. Implementing custom content handlers — for short-term use — unnecessarily adds overhead to critical minimum viable product (MVP) timelines. OnBase fits within Guidewire sprint plans and takes six weeks or less to align to the Guidewire Stability phase.

3

TOTAL TEAMWORK

Hyland adds valuable experience to augment internal teams and resources. This experience reduces 'drag' to ensure project targets are achieved without reduction to scope.

4

BUILT FOR FUTURE GROWTH

Hyland partners with Guidewire to reduce the cost to implement a full MVP by up to 50 percent. Since Hyland maintains the integration, new capabilities and enhancements are available to you at no charge.

This eases future upgrades and helps you maintain pace with the speed of your business when extending your solution.

5

MINIMIZE CONVERSION, MIGRATION AND SOLUTION TRAINING

By starting now, you reduce reconfiguration spend (integration, processes) and introduce added flexibility (options) for when you need to transition from legacy archives.

6

IMPROVE THE CUSTOMER EXPERIENCE

Most legacy tools cannot satisfy modern requirements out-of-the-box and require customization to meet business requirements. This impacts the user experience — while also increasing the TCO of your solution. Investment in technologies — like OnBase — that focus on out-of-the-box capability, configuration-based solutions are better positioned to satisfy the demand on today's business.
