# HYLAND INTEGRATION FOR ESRI®

## Seamlessly work with GIS data, content, processes and information

Quickly respond to requests, share information and attach related documents to maps with the Hyland integration for Esri GIS. With a Hyland content services platform, geographic information system (GIS) users make decisions and process documents faster without ever leaving their familiar GIS environment.

Whether staff are in the office or the field, the variety of formats they use — photos, maps and documents — makes sharing information difficult. With the Hyland integration for Esri, all necessary information is accessible from the maps they use every day, from wherever they're working.

Provides easy  
information access

Automates processes for  
more efficient government

Stores documents securely

Seamlessly integrates  
with existing systems

Securely  
store multiple  
document types

Access documents any  
time, from anywhere

Automate previously  
paper-based processes

Together, a content services platform and Esri manage the information, content and processes that government staff need to deliver programs and serve their constituents.

### ENHANCES GIS FUNCTIONALITY

Automating processes that used to rely on paper shortens processes by days or even weeks. Documents stored in your Hyland solution automatically kick off document-centric workflows for any department that may need to be involved or notified.

The integration provides easy access to information. Users import documents and your Hyland platform automatically indexes them based on multiple selected map features. They can also complete work in the field and retrieve documents from GIS applications. Document security eliminates concerns about inappropriate access to file shares or lost links after accidental renaming or deleting.

### IMPROVES BUSINESS PROCESSES

With a Hyland content services platform, users don't need to switch between applications to search for information, because everything is stored in a single, central repository. Users access the information they need, no matter their location, without searching multiple systems for related documents.

The solution seamlessly integrates with existing databases. Critical documents are connected to GIS data without extensive programming and costly coding. And by keeping users in their familiar Esri application interface, training is minimal and adoption is high.

### EVOLVES WITH YOUR ORGANIZATION

Hyland lets you meet your GIS needs with one easily supported application. Start with a single department and expand your solution as time and budget permit. Your Hyland solution helps improve processes throughout your organization with a variety of additional features:

**Codeless integration tool:** Integrates business applications with a content services platform without coding, providing a complete interaction between the business application's screen data and related documents, content and process management.

**Workflow and case management:** Automates processes and gives users a 360-degree view into case-based activities, allowing for smarter decisions faster, with all the information they need at their fingertips.

**Advanced capture:** Automatically classifies and indexes scanned documents with predefined forms and rules, and a reliable optical character recognition (OCR) engine.

**Document composition:** Aggregates information from multiple sources and automatically generates Microsoft Word® documents.

The Hyland integration for Esri securely manages documents with geospatial assets so GIS users don't have to. Hyland solutions are affordable, easy to configure and user friendly, making it a financially sustainable solution with an ROI that emerges almost as quickly as the solution deploys.
