

Solution Summary | Government | Esri®

## Leverage Esri GIS by linking documents, drawings and processes

Provides easy information access

Automates processes for more efficient government

Stores documents securely

Quickly respond to requests, share information and attach related documents to maps with the OnBase integration for Esri GIS. With OnBase by Hyland, an enterprise content management (ECM) solution, GIS users make decisions and process documents faster without ever leaving their familiar GIS environment.

Whether staff are in the office or the field, the variety of formats they use – photos, maps and documents – makes sharing information difficult. With the OnBase integration for Esri, all necessary information is accessible from the maps they use every day, from wherever they're working.

Seamlessly integrates with existing systems

Securely store multiple document types

Access documents any time, from anywhere

Automate previously paper-based processes

## Enhances GIS functionality

Automating processes that used to rely on paper shortens processes by days or even weeks. Documents stored in OnBase automatically kick off document-centric workflows for any department that may need to be involved or notified.

The OnBase integration provides easy access to information. Users import documents and OnBase automatically indexes them based on multiple selected map features. They can also complete work in the field and retrieve documents from GIS applications.

Document security eliminates concerns about inappropriate access to file shares or lost links after accidental renaming or deleting.

## Improves business processes

With OnBase, users don't need to switch between applications to search for information, because everything is stored in a single, central repository. Users access the information they need, no matter their location, without searching multiple systems for related documents.

OnBase seamlessly integrates with existing databases. Critical documents are connected to GIS data without extensive programming and costly coding. And by keeping users in their familiar Esri application interface, OnBase training is minimal and adoption is high.

## Evolves with your organization

OnBase lets you meet your GIS needs with one easily supported application. Start with a single department and expand your ECM solution as time and budget permit. OnBase helps improve processes throughout your organization with a variety of additional features:

**Codeless integration tool:** Integrates business applications with OnBase without coding, providing a complete interaction between the business application's screen data and related OnBase documents, content and process management.

**Workflow and case management:** Automates processes and gives users a 360-degree view into case-based activities, allowing for smarter decisions faster, with all the information they need at their fingertips.

**Advanced capture:** Automatically classifies and indexes scanned documents with predefined forms and rules, and a reliable optical character recognition (OCR) engine.

**Document composition:** Aggregates information from multiple sources and automatically generates Microsoft Word® documents.

The OnBase integration for Esri securely manages documents with geospatial assets so GIS users don't have to. OnBase is affordable, easy to configure and user friendly, making it a financially sustainable solution with an ROI that emerges almost as quickly as the solution deploys.
