

Empowers end users to make efficient, confident decisions

Guarantees data delivery to protect Colleague as the system of record

Provides single-click access to the complete student record

Solution Summary | Higher Education | Integration for Colleague®

Your business processes make Colleague by Ellucian smarter with OnBase

Adding smarter business processes can make your Colleague solutions, already the backbone of your institution, even stronger. Leverage your critical investment – time, training, software and services – to extend your Colleague solutions and protect your investment with OnBase enterprise content management (ECM).

With OnBase, your processes, such as admissions application processing, transcript evaluation, financial aid award verification, curriculum review, HR faculty contract management and so much more, are quicker, more accurate and easier to accomplish.

Examine how campus decisions are made

With OnBase, your business processes start by capturing documents and pulling data from Colleague into one central database. OnBase then takes the data and associated documents and routes them around campus according to your workflow, tracks when tasks are complete, sends reminders when they are not, and writes the final decision and data back to Colleague.

By integrating OnBase with Colleague, the two systems share information in a seamless exchange. The out-of-the-box functionality of OnBase makes fast work of integration. Its “drag-and-drop” configurability eliminates the need for custom coding or scripting and ensures mission-critical decisions are based on the most accurate, up-to-date data available.

Guaranteed delivery of data between systems – no code required

The OnBase Integration for Colleague guarantees real-time delivery of data to the Colleague solutions users rely on. Only OnBase has guaranteed data delivery in its integration. If your ERP is down for maintenance or a record is locked, OnBase will queue the data to be delivered and keep trying until the data successfully reaches its destination.

With this real-time data exchange between OnBase and Colleague, employees don't have to double-check information in multiple systems, empowering them to focus on their core tasks – like serving students and faculty.

Integration is the strategic advantage that is no longer an option

When you leverage the OnBase Integration for Colleague, you bring data from Colleague to support making decisions and send those decisions back to Colleague. This protects Colleague as your system of record and eliminates people checking multiple systems to be sure they have all they need in departments such as:

- **Admissions:** The integration speeds admit decisions by automatically indexing documents, updating Colleague checklists and electronically routing the complete applications to the appropriate counselors
- **Financial Aid:** The integration supports faster financial verification, supporting compliance and giving confidence during awarding to help protect enrollment numbers
- **Transcript Processing:** The integration writes an equivalency decision and the resulting new rule to Colleague so the system is immediately ready to award credit the next time that course is transferred
- **HR:** The integration updates document checklists to speed and simplify employee on-boarding and support compliance

Why integrate with OnBase?

You can't afford an ECM solution that doesn't integrate with your ERP because the footprint of a business process is larger than the footprint of your ERP. Critical decisions involve people that don't spend time in the ERP and follow a process that the ERP can't enforce. Integrating OnBase informs and speeds those decisions so quick, smart choices are made across your institution.
