

THE BENEFITS OF A LOW-CODE CONFIGURATION PLATFORM

Be more responsive to the needs of your organization by rapidly configuring lightweight, content-enabled business applications across your company.

SUMMARY

Hyland's content services platform equips you with the power to point-and-click configure a variety of business applications of low-code configuration — including those that support dynamic case management and process automation — that fill in the gaps between your line-of-business systems. Minimize the need for costly custom coding, inefficient shared spreadsheets and disconnected point solutions. Replace antiquated departmental databases, including Access and Lotus Notes, with applications that seamlessly connect data, processes and related documents.

By building business applications on top of Hyland's comprehensive low-code platform, you take advantage of robust native functionality (such as content management, automation and security controls) and enhance applications with a wide-range of content services capabilities. One platform scales to support a spectrum of applications across your organization, whether on-premises or in the Hyland Cloud.

BENEFITS

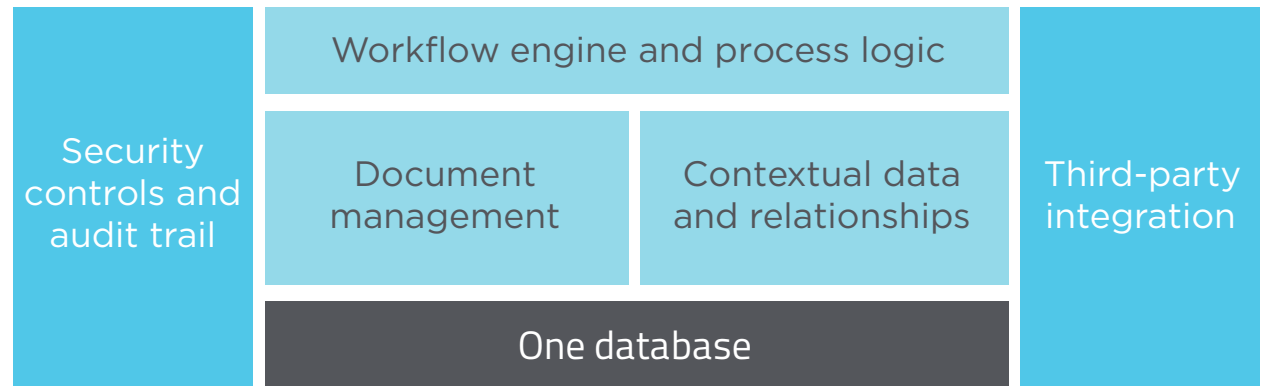

- **Build business applications at the speed users expect** while meeting corporate demands for governance and control
- **Equip business users to manage cases and knowledge work** by providing access to all data, documents and processes
- **Capture data first, then grow the solution over time**, as process steps become clearer
- **Minimize the need for costly custom coding and disconnected point solutions** with a point-and-click framework
- **Manage security, upgrades, compliance and maintenance in a single place** with one fully integrated product
- **Scale the Hyland platform** to meet business needs across your organization, maximizing ROI

The Hyland logo is displayed in white text on a green-to-blue gradient square background. The word "Hyland" is written in a serif font, with a registered trademark symbol (®) to the upper right of the letter 'd'.

Hyland[®]

3  **Point-and-click configure business applications** 

1 Hyland Platform

DESIGN

- 1. One platform and database support document, data and process management** with built-in security controls, audit trails, out-of-the-box reporting, third-party integration and more.
- 2. Present information to business users through a variety of access methods**, including desktop clients, dashboards, web browsers, email inboxes and mobile devices.
- 3. Rapidly point-and-click configure business applications** that support case-driven and process-centric work, scaling the platform to solve business problems across your organization.
