Unlock the Power to Deliver Connected Care and Improved Outcomes

To deliver the best possible care outcomes, clinicians need a connected, interoperable healthcare data solution that delivers a comprehensive view of patient health. But today, gaps in data access abound.

Nearly **3/4** of hospitals and health systems lack complete access to medical images, clinical notes and other data crucial for informed care decisions, according to recent HIMSS Market Insights research.* A connected care solution can break down these barriers.
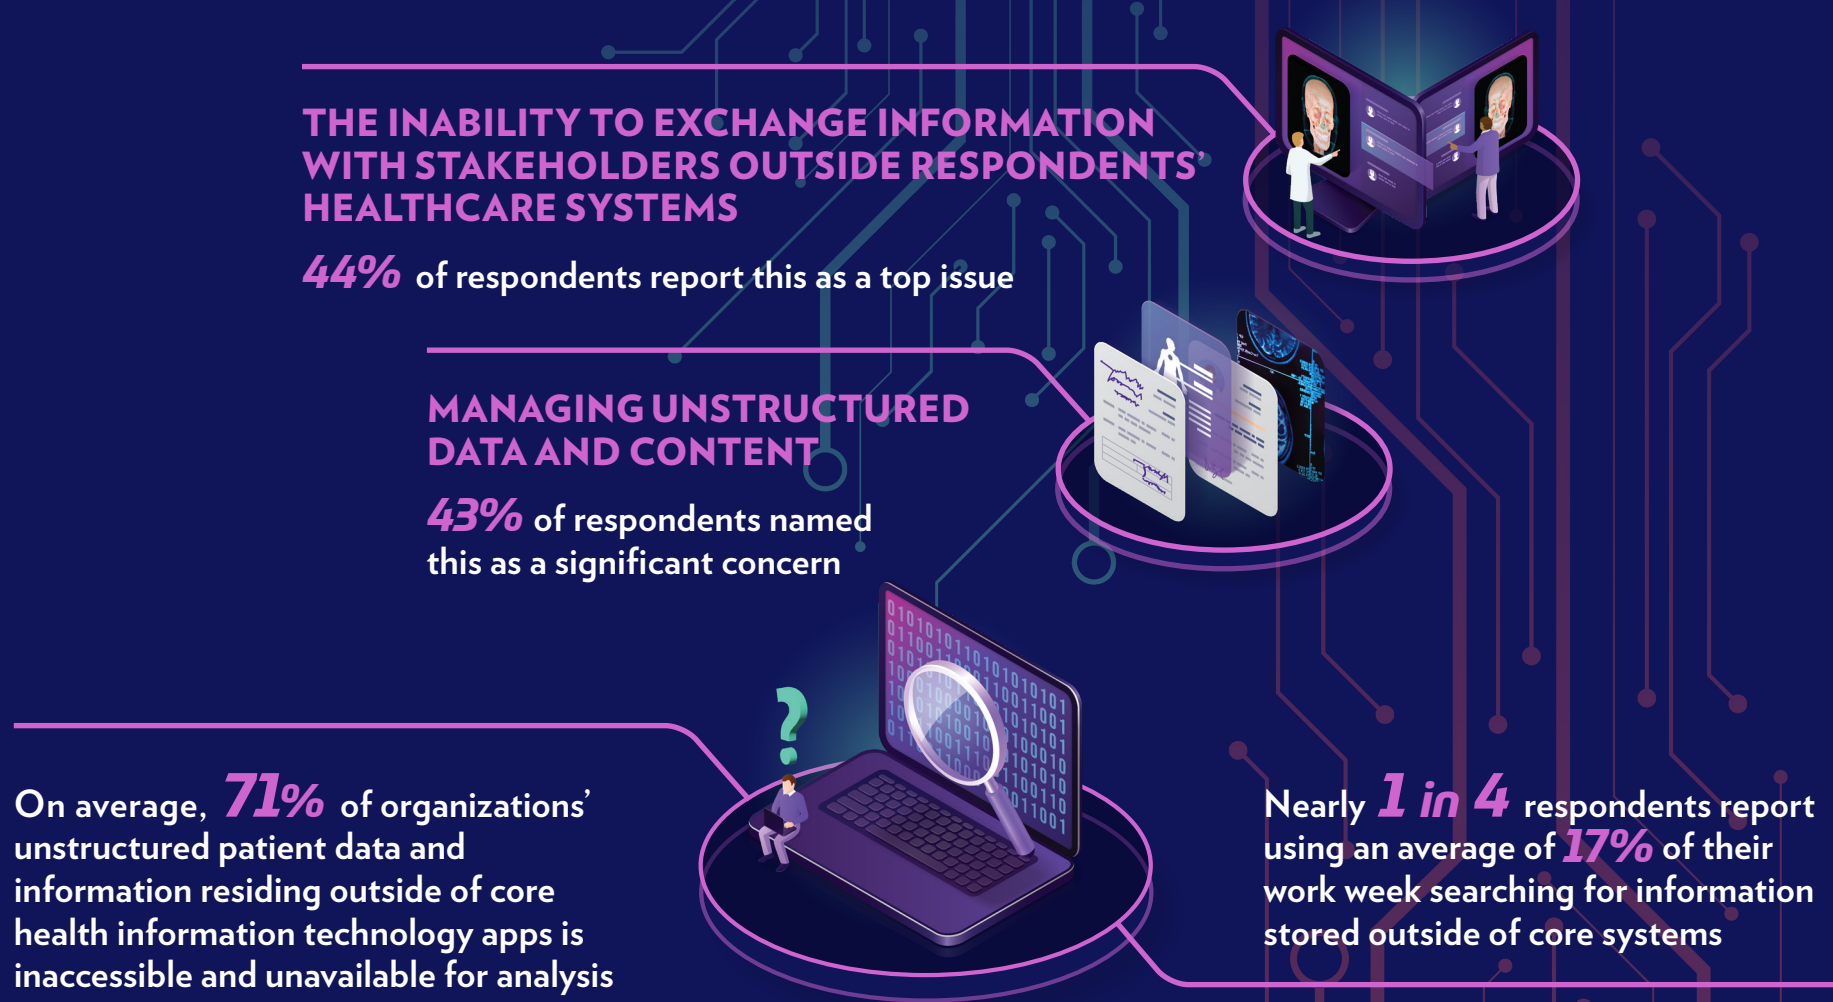

## HERE'S WHAT SURVEYED HEALTHCARE LEADERS REVEAL:

### There's a disconnect between their top goals and reality

IMPROVING PATIENT OUTCOMES
Only **49%** report being very effective at this

OPTIMIZING CLINICAL WORKFLOWS AND PERFORMANCE
Only **39%** believe their organization is effective at this

Healthcare leaders face big obstacles to improving patient care and workflow efficiency

THE INABILITY TO EXCHANGE INFORMATION WITH STAKEHOLDERS OUTSIDE RESPONDENTS' HEALTHCARE SYSTEMS
44% of respondents report this as a top issue

MANAGING UNSTRUCTURED DATA AND CONTENT
43% of respondents named this as a significant concern

On average, **71%** of organizations' unstructured patient data and information residing outside of core health information technology apps is inaccessible and unavailable for analysis

Nearly **1 in 4** respondents report using an average of **17%** of their work week searching for information stored outside of core systems

Spending time on manual tasks contributes to clinician burnout and reduces time spent with patients

Only **24%** report their organizations are effective at using technology to reduce the time and cost of processing clinical documentation
↓**16%** from 2023

HEALTHCARE LEADERS SEE MODERN CONNECTED CARE PLATFORMS AS A SOLUTION

64% of health systems are looking to add a connected care platform to deliver unstructured enterprise content, images and video for access within their EHR workflow

49% anticipate purchasing one within the next 12 to 24 months

As part of these plans,

61% are developing or have identified the need for an enterprise imaging strategy but haven't fully deployed it yet

47% of health systems are planning to establish a vendor neutral archive as part of this strategy

55% are planning or investigating automated classification of unstructured data to speed its use in core systems

51% of health systems are looking to acquire a solution to build new applications to support connecting content, process workflows and case management for their healthcare ecosystem

45% of health systems are looking to deploy a content services solution in the cloud

Experience the power of a connected care platform.
