

Extend the value of your ERP

Maximize ROI with process automation and content services

Despite investing in technology and solutions to handle financial processes more efficiently, critical accounting and finance activities at many organizations are still slowed down by manual tasks.

At the same time, finance and accounting managers are being asked to handle processes faster, provide more accurate and usable data to business users and reduce costs. The question isn't how to set priorities: Meeting all these objectives is essential for any organization to remain competitive for the long term. The real issue is finding ways to do them better.

You've already got the foundation

Good news: The problem is not your ERP. It was designed to record, manage and protect enterprise financial data through precisely defined roles for usage. And it does that very well.

What it doesn't do well is let you capture, manage or access any of the unstructured information that clarifies and supports recorded transactions for receivables and payables. Nor does it make it easy to provide up-to-date information about those transactions to people who need it to do their jobs.

To stop chasing key information and patching together reports for business units, you need technology that works with your ERP to put all the information and processes it doesn't control into context with the transaction data it does contain. You need process automation and content services from Hyland.

Build on your ERP investment

Hyland solutions work with the technology you already have—even multiple ERPs—so your IT strategy remains intact. It's true, deep integration that smoothly connects processes and documents with transactions in your ERP. So you eliminate error-prone, time-consuming manual tasks that often take place behind the scenes, and start working with your ERP instead of around it.

Automate any size operation

Hyland offers process automation solutions to fit nearly any operation. Whether you're processing thousands, hundreds of thousands or even millions of transactions on a monthly basis, we can tailor the functionality and scope to fit your needs. It's a practical approach to automation that recognizes the delicate balance between business requirements and the need for a healthy return on investment. We can help you chart a technology path to fit current needs of your organization that can be easily adapted as requirements change.

Manage content for any financial process

Purchase-to-pay, order-to-cash and everything in between – we've covered it all with our flexible and extensive technology portfolio. We combine the right intelligent capture, document management, automation and mobile capabilities to suit your organization's needs – deployed on-premise or the cloud.

A complete technology line-up for complete automation

Capture

Collect documents and data from any source: paper, fax, email attachments, XML and PDF. After capture, relevant data is validated and transferred to your enterprise systems, content can be securely stored in the Hyland repository and documents are easily accessible throughout the financial process workflow.

Content

Built on a fast, scalable, world-class storage model, our content management capabilities cover everything from electronic signatures, to records management to document composition.

Process

Adaptable, user-friendly workflow enhances flexibility yet provides a structured means to ensure business process integrity. Auto-notifications and connection to your enterprise email applications keep staff informed and provide the workflow access needed to keep processes moving.

Measure

With interactive reporting dashboards, spot process bottlenecks before they occur and balance workloads as needed. Monitor invoice status and volume, and keep track of accruals and invoice aging for more accurate cash flow management.

Integration

Seamless, intuitive and efficient integration capabilities let you capture, manage, access and process invoices, sales orders, vendor communications and any other information related to your financial processes more effectively across your entire IT environment.

Hyland extends the value of process automation throughout the enterprise

Increase visibility for more informed financial decisions

Improve transparency by giving business units access to current data in a usable format, so they can more effectively manage working capital and fulfill strategic objectives.

Unify processes and information

Standardize data extraction, ensure the integrity of business rules, reduce exceptions and eliminate workarounds, so there is one version of “the truth” and only one place to get it.

Unlock information trapped in unstructured content

Extract data efficiently across multiple channels and formats, then validate and pass it through to your ERP for near real-time evaluation of key indicators.

Boost the functionality of existing systems

Integrate smoothly with existing ERPs to minimize disruption, speed optimization and increase adoption.
