

Manages plan sets and other documentation seamlessly

Securely shares content across the enterprise, even with mobile users

Removes paper from the approval process

Solution Summary | Government | Tempest®

Connect Tempest Permitting and OnBase Electronic Plan Review

The integration between Tempest Prospero and OnBase by Hyland gives Tempest users instant access to the plan sets, reports and documentation they need from one central repository. With OnBase, your Tempest Prospero solution is seamlessly tied to electronic plan review, and key content, making community development more efficient.

Extending your Tempest solutions with OnBase Electronic Plan Review means simpler, paperless management of plan sets, markups, site photos, as-builts and everything in between.

OnBase
by Hyland

Connects your permitting tasks to a central content repository

With Tempest and OnBase, agencies track permits, planning and development, and code enforcement from one interface. When a permit is issued, there's no guessing where the supporting plans and documentation exist, or whether they are accurate and up to date.

Better project management and review happen when all the right content can be accessed from one place. Finding engineering studies, photos, plans and other relevant data on a project no longer requires hours of searching through paper files in multiple locations. And, archiving permits and other documents makes that information available throughout the organization, providing consistent information to involved parties, improving project transparency and creating a historical archive that can be accessed by first responders or future planners.

Enables seamless transition to electronic plan review

There's no need to scan paper documents, since data can be captured from Tempest Prospero and leveraged in OnBase Electronic Plan Review from the start of the project. From there, OnBase takes over, creating and managing a transparent, efficient and paperless plan review effort. When multiple parties need to review and approve plan sets, OnBase provides instant access and the ability to collaborate in real time. Automated comment tracking and reviews help you meet deadlines while reducing paper across the enterprise.

Goes beyond electronic plan review

OnBase connects all the critical solutions you use to run your government agency, from accounting and human resources to field work, GIS applications and your Tempest solutions. OnBase Electronic Plan Review can be leveraged later to store content for your entire enterprise, so the investment you make today for efficient plan review continues to improve your operations into the future. Your content will be securely stored and accessible from anywhere on virtually any device.

OnBase is tailored for the department and comprehensive for the enterprise.
