

## Create a true enterprise solution with ECM and Cerner

Access to timely and accurate information is critical to patient care. But if your organization relies on an electronic medical record (EMR) as the sole repository for patient information, vital content could be missing. Hunting down this information is not only time-consuming, but it also increases the risk of clinicians treating patients without the full picture.

Integrating your existing Cerner PowerChart EMR with the OnBase enterprise content management (ECM) solution helps eliminate that risk. OnBase allows you to store that unstructured content – like faxes, hand-written notes and digital photos – and seamlessly link it to the EMR. That way, clinicians and staff have the information they need right when they need it.

### The Payoff

- Provides clinicians and staff with a complete patient record
- Connects your IT investments and extends their value
- Automates and improves processes throughout the organization

### Complete the patient record

Throughout the continuum of care, OnBase works in conjunction with your Cerner EMR to ensure a complete electronic record. At every phase – from scheduling to the patient visit and beyond – staff and clinicians have fingertip access to the information they need to deliver superior care and service.

### Challenges

- The EMR is missing up to 25 percent of the patient record
- Switching between disparate applications wastes time and money
- Manual processes lengthen the time it takes to complete tasks

# 100% COMPLETE PATIENT RECORD

---

### Fill the gaps in the patient record

Nearly 25 percent of the patient record consists of unstructured content like surgical videos, digital photos and paper forms. Because the EMR doesn't inherently capture this information, clinicians and staff face the challenge of hunting it down in storage rooms, file cabinets, clinical devices and other applications. Even worse, this creates the possibility of treating a patient without the complete picture in mind.

Combined with Cerner PowerChart®, OnBase helps gather that unstructured content and makes it easily retrievable, enabling clinicians to find it right when needed. And because OnBase integrates completely with Cerner PowerChart, staff can continue working within the EMR – an environment they already know and understand.

---

### Connect all of your existing systems to enhance every department

The EMR represents the heart of your healthcare IT system, but organizations often rely on several other smaller systems as well. Unfortunately, navigating through all those disparate systems to complete tasks wastes staff time and creates opportunities for error.

Flexible integration options – such as an API approach and HL7 – allow OnBase to unify every system in your organization. And best-practice implementation methodology from more than 1,400 lifetime healthcare customers ensures an ECM solution that aligns precisely with your needs. No more time spent switching among systems, no more redundant, error-prone steps. OnBase helps you take full advantage of your existing IT investments while extending their value.

---

### Streamline processes throughout the entire organization

Mismanaged content affects more than just clinical care. It also delays administrative processes and slows the revenue cycle. Without easy access to content like insurance cards, driver's licenses and EOBs, staff works less efficiently, delaying billing processes and causing holdups in answering patient inquiries. In order to improve efficiency throughout your organization, you need a solution that touches every department.

OnBase, a true enterprise solution, goes beyond simply scanning paper and retrieving images. Its document retention and records management solutions help you manage and enforce retention policies. Secure, HIPAA-compliant storage and role-based access aid in maintaining compliance with regulatory initiatives. Physicians view and sign documentation from their homes and offices. User-friendly workflows allow you to proactively direct information to the appropriate staff.

At every phase of patient care and service, the OnBase Integration for Cerner provides clinicians and staff with fingertip access to content, clinical and otherwise, normally outside the EMR and other core HIT applications. With OnBase, your organization will not only complete the patient record, but also eliminate reimbursement delays and enhance processes from admittance to billing.
