HYLAND™

7 things you need to know about Hyland for Workday

Hyland for Workday is here. It's redefining how organizations manage and interact with content across Workday Human Capital Management (HCM) and Finance. This release delivers the capabilities to streamline operations, strengthen governance and lay the foundation for AI-driven innovation. Here are seven key things you need to know:
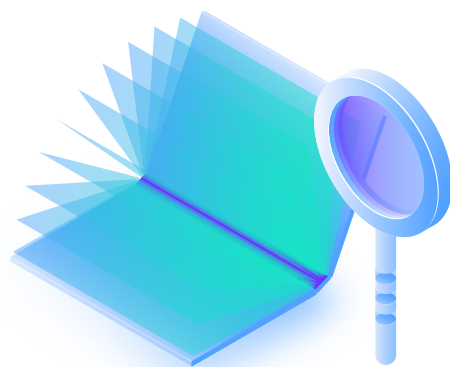

1 Unified integration for HCM and Finance

Hyland for Workday introduces a single, streamlined integration that supports Hyland OnBase and Hyland Content Innovation Cloud™. From employee records to supplier invoices, this unified approach simplifies deployment and ensures consistent content access across Workday modules.

2 In-context access to high-value content

No more toggling between systems or manual uploads. Users can now import, search, retrieve and view documents directly from Workday screens — enabling faster workflows, fewer errors and a more complete view of employee and financial data.

3 AI-ready content foundation

Transform your documents into an AI-ready collection — structured for intelligent search, automated governance and contextual insights. This foundation supports advanced capabilities like Knowledge Discovery and prepares your organization for agentic AI workflows in the future.

4 Governance and retention made easy

Apply retention policies, manage document versioning and enforce legal holds with Content Innovation Cloud — fully integrated with Workday records but managed outside it, ensuring compliance without disrupting user workflows.

5 Rapid deployment and SaaS scalability

Built on modern SaaS architecture, Hyland for Workday supports multitenant hosting, low-code configuration and rapid upgrades. Whether cloud-native or hybrid, you'll benefit from faster time to value and lower total cost of ownership.

6 Built on Workday certified

As an approved Built on Workday application, Hyland for Workday meets stringent standards for integration, security and performance. This certification gives customers confidence in its reliability and future roadmap.

7 Future-proofed for AI and automation

With 80–90% of enterprise data still unstructured, Hyland's integration unlocks that value. Intelligent content services embedded in Workday enable automation for onboarding, offboarding, employee questions and driving insights — all powered by structured, searchable content.
