OnBase Integration for Corelation Keystone

Seamlessly manage content and automate processes

Today's credit unions are tasked with managing an ever-growing influx of content that is arriving from a variety of sources. Modernization has become a priority with credit unions seeking ways to leverage all of its content to drive greater insights, improve member experience and support long-term growth.

Hyland's OnBase integrates with the Corelation Keystone core banking platform to provide employees with a comprehensive view of data and documents to work more efficiently. OnBase centralizes content and connects it to the data in your core, providing users with instant access to critical documents like teller receipts, forms and reports.

Integration benefits

The OnBase Integration for Corelation Keystone amplifies the power of your core banking system by delivering efficient digital workflow processes and easy access to content for users via lowcode configuration. The solution supports operational excellence initiatives and empowers credit unions to offer exemplary member service.

Key features

- **Centralize content:** Access a full range of enterprise-class, secure document management capabilities on a single platform that is seamlessly integrated with your core system.

- **Automate tasks and improve processes:** Quickly and easily extend existing processes and create new ones like loan application reviews, fraud investigations and records management.

- **Consolidate disconnected data:** Combine any scattered data, tasks and activities residing outside of your core system into a single location where it's connected and tracked.

- **Reporting automation:** Take data from your core and turn it into fully indexed and widely accessible reports and documents that are viewable in an instant by authorized users.

- **Account management:** Recreate paper-based forms into electronic forms accessed through your intranet, website and banking platforms with point-and-click configuration for a quicker and more accurate process.

- **Regulatory compliance:** Support compliance efforts with a full audit trail of all interactions.

- **Optional services:** A full solution export and documentation can be managed by Hyland Services, speeding implementation timelines.
