READY TO
LAUNCH?

Epic Hyperdrive is coming. Are you ready for takeoff? Before you throttle up, make sure you've charted the right course to content services success

Imagine your task is to pick a vehicle that will send astronauts to the moon. You need to make a decision, because, either way, those astronauts are headed to space.

Do you choose the safer, simple-to-pilot capsule, navigated with innovative technology? Or do you

stick with an older rocket docked out back because you like the way it flies, doesn't impact the budget, and will hopefully help your astronauts make it to the moon?
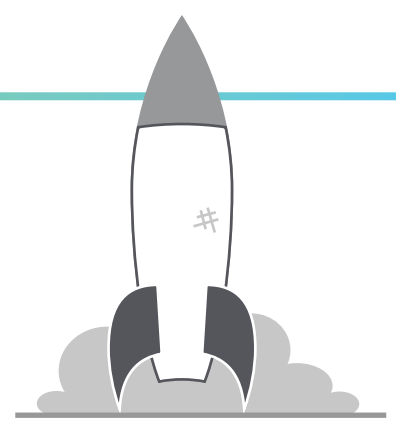

Healthcare organizations that employ Epic's electronic medical record (EMR) will soon make a

similar choice. As Epic transitions to Hyperdrive, its new web-based browser platform, hospitals will have to decide whether to stick with their current content services solution or choose something new.

How do you choose? We have some thoughts.

STICKING WITH WHAT YOU'VE GOT?

Even if your current enterprise content management solution integration with Epic works well, that could change when your organization moves to Hyperdrive. Talk to your vendor to ensure you won't see any loss in functionality, productivity or adverse patient outcomes.

DANGER! DANGER!
Without a seamless integration with Hyperdrive, your hospital risks losing access to vital patient data

A BAD FEELING
Loss of information access creates both clinician frustration and the potential for poor patient outcomes when care decisions are made on incomplete information

SECURITY ALERT
Any disconnection can jeopardize your hospital's ability to recover from a disaster or an unexpected event

JOIN THE HYLAND CREW

Hyland Healthcare's longtime collaboration with Epic ensures our healthcare solutions provide a seamless integration with EpicCare and other applications, empowering customers by securely capturing, managing, viewing and instantly sharing vital patient information to clinicians when and where they need it. That strategy won't change with Epic Hyperdrive.

THE ONE (AND ONLY)
Hyland is the only content services platform vendor that delivers a direct integration with Epic Cloud

COMPLETE ACCESS
Access all non-EMR content, from EKGs to clinical images, from within Epic

MORE THAN 50%
Epic customers rely on OnBase

40 AND GROWING
Integrated Epic applications

CHOOSE THE RIGHT FOUNDATION

Even though you may not be moving to Epic Hyperdrive until 2022, it is advantageous to make the move to OnBase Foundation now. *"Why now?"* Well, for a few reasons.

INCREASED PRODUCTIVITY
New enhancements, like the ability to speed correction of deficiencies, boost staff output

ENHANCED PERFORMANCE
Updates provide improved solution performance while simultaneously reducing costs

GREATER SECURITY
Advanced functionality enhances viewer privacy and activity audits

ROCKET TO THE CLOUD

When it's time to transition to Epic Hyperdrive and OnBase Foundation, customers can choose to retain their solutions on-premises, though that decision could require investment in added web servers and the IT staff to maintain them. Instead, consider a move to a SaaS solution, like the Hyland Cloud. It can seem a bit daunting at first, but this is the perfect time to make the change. Plus, the benefits outweigh any butterflies.

DATA AT LIGHTSPEED
An integrated Hyland Cloud and Epic Cloud delivers data to clinicians instantly

DISASTER RECOVERY
Access to critical solutions — and a support staff — from virtually anywhere at anytime

HIT FREEDOM
From upgrades and installs to servers and security, Hyland manages it all

SCALABLE FOR GROWTH
The flexibility, computing power and scalability to respond quickly to new demands

SECURE PATIENT INFO
Independent layers of security continuously protect critical patient data and more
