

NILREAD FOR PATIENT PORTALS

- ✓ Image enable your patient portal
- ✓ Increase patient engagement and loyalty
- ✓ Meet consumer expectations and government regulations
- ✓ Significantly reduce the number of CDs you burn
- ✓ Provide a “digital front door” experience

Hyland Healthcare’s enterprise, multi-specialty viewer can image enable your patient portal

Studies show that patient portals increase patient engagement and loyalty to providers. However, many portals only give patients access to a limited set of clinical information, meaning that patients must still contact radiology, cardiology or the department where the medical image was captured to pick up a CD. But it doesn’t have to be this way.

You can replace your CD workflow with a digital alternative: Hyland’s NilRead for Patient Portals. This solution allows patients to access, view, share and download their images from a computer, tablet or their mobile device through their patient portal. This helps you respond to consumer expectations while complying with government regulations that mandate patient access to all of their health information.

IMPROVED PATIENT EXPERIENCE

With NilRead for Patient Portals, patients gain control over their medical images. They can easily share them with other physicians or care providers — even with friends or family, if they choose. A patient can download and email an image or share the image by link.

Patients don’t have to come to your location to pick up a CD or worry about the possibility of infection from sharing CDs. They can also upload images to create a longitudinal image repository or share them with consulting physicians prior to their appointment. Most patients access their images via their mobile phones which brings image viewing and sharing into their normal everyday method of information retrieval.

The Hyland logo is positioned in the bottom left corner of the page. It consists of the word "Hyland" in a white, serif font, set against a square background with a vertical color gradient from green at the top to blue at the bottom.

EASY FOR PROVIDERS TO SUPPORT

Providers can customize NilRead for Patient Portals to suit their patient population. The interface is intuitive and easy to learn and use. Patients become autonomous very quickly, allowing providers to significantly reduce the time spent on the administration, burning and distribution of CDs.

NILREAD FOR PATIENT PORTALS

NilRead is a zero-footprint, web-based viewer that leaves no images on the viewing device. It is easy to install and supports every major PACS and EMR. Multiple image formats are supported, including DICOM, TIFF, GIF, JPEG, PDF, video and more. NilRead for Patient Portals is a limited version of the full NilRead diagnostic viewer, which makes it an affordable solution. For existing NilRead customers, it is simply an extension of your current NilRead license.
