

HYLAND INTEGRATION FOR CONSENSUS CLOUD

There have been many changes in technology since the analog fax machine was introduced in 1964. Given the high costs for on-site hardware, software, telephone lines, long distance charges, paper, toner, printers, rack space — and the labor to maintain these machines — it's a good time to consider an alternative.

Hyland integration for Consensus Cloud deploys internet fax to securely transmit protected health information directly to OnBase with end-to-end encryption and ultra-fast transmission speeds. Upon delivery, patient records can be automatically classified by document type through Intelligent MedRecords or

indexed by HIM staff within OnBase. Then these patient records may be accessed by clinicians so they can make informed decisions within EMR workflow using Hyland Clinician Window, OnBase Patient Window or the Healthcare web viewer.

HYLAND INTEGRATION WITH CONSENSUS CLOUD (FOR HEALTHCARE)

Hyland integration for Consensus Cloud deploys internet fax to securely transmit protected health information directly to OnBase with end-to-end encryption and ultra-fast transmission speeds.

BENEFITS

Reduce total costs of ownership

Hyland integration for Consensus Cloud delivers a more reliable enterprise solution while reducing total costs. Consensus Cloud estimates that its eFax Corporate solution can save organizations up to 70% on fax infrastructure. The cloud fax solution also changes costs from a capital expenditure to a preferred operating expense with only a small transaction fee that is based on volume.

Improve security and regulatory compliance

Consensus Cloud's eFax Corporate solution utilizes the strongest security protocols recommended by the National Institute of Standards and Technology (NIST) and the Payments Card Industry (PCI). In addition, Consensus Cloud secures exchange

of protected health information (PHI) by incorporating other nationally and internationally accepted standards including HITECH and HIPAA, and is fully validated by the HITRUST CSF Certification. Consensus Cloud supports compliance with HIPAA, PIPEDA, SOX, GLBA, PCI and other regulations through audit trails and encryption to secure documents in-transit and at-rest.

Provide for high availability and speed business processes

In addition to time savings achieved compared with analog fax, Consensus Cloud offers high availability and built-in disaster recovery and failover. Consensus Cloud's eFax Corporate operates dozens of telco-grade data centers in geographically distinct regions, so if one center experiences a problem, your fax service is immediately shifted to another data center, to deliver better than 99% uptime.
