MOBILE eCAPTURE

✓ **Improves the patient experience**

✓ **Speeds registration processes**

✓ **Reduces organizational costs**

## Increase accuracy and drive key processes in any location, without paper

Mobile eCapture eliminates inefficient paper forms and streamlines processes, reducing organizational costs while increasing the accuracy of the most current patient data.

By utilizing smartphones and tablets* to capture decision-critical, discrete data and documents once, healthcare organizations improve document- and signature-intensive processes, like patient registration and completing various consent forms. Another bonus? Patient satisfaction goes up, too, because you don't need to repeatedly ask them to provide the same information.

IMPROVES THE PATIENT EXPERIENCE

With digital, tablet-based registration, patients spend less time in waiting rooms completing redundant forms and entering duplicate data. And, when patients visit another unit, they won't be asked to fill out the same forms they'd completed minutes or days earlier.

Mobile eCapture prepopulates forms with information from the EMR, such as name, date of birth and address, so patients only need to complete the information they've not yet provided.

Identify patient by unique number

Retrieve content from OnBase

Upload photos and videos

Fill out forms and capture signatures

Hyland®

* iOS is supported on both mobile phones and tablets. Android support is only available on a tablet.

> " Mobile eCapture gets the patient into the exam room faster, removing barriers between the patient and the MD. It has put smiles on the faces of our staff and saved trees."

Dr. Nieca Goldberg
Medical Director
NYU Langone Joan H. Tisch Center for Women's Health

SPEEDS REGISTRATION PROCESSES

Mobile eCapture eliminates the scanning and indexing tasks associated with paper-based registration processes.

Because Mobile eCapture collects patient information electronically, registration staff no longer need to manually enter it into the system, freeing them to direct their attention to higher-value tasks, like patient service. Once registration forms have been completed, the information is immediately available in the EMR within the patient record, allowing downstream processes — like patient billing — to start sooner.

REDUCES ORGANIZATIONAL COSTS

The improved accessibility of accurate and up-to-date patient information empowers better outcomes while dramatically reducing the administrative costs associated with paper handling, scanning and storage.

Mobile eCapture electronically delivers validated patient information where it needs to go, instantly, to any person or system that requires it. Clinicians and staff have immediate access to consent-to-treat forms and anesthesia and surgical consents so they can spend more time with patients and less time manually entering data.
