

ONBASE FOR POST-ACUTE CARE

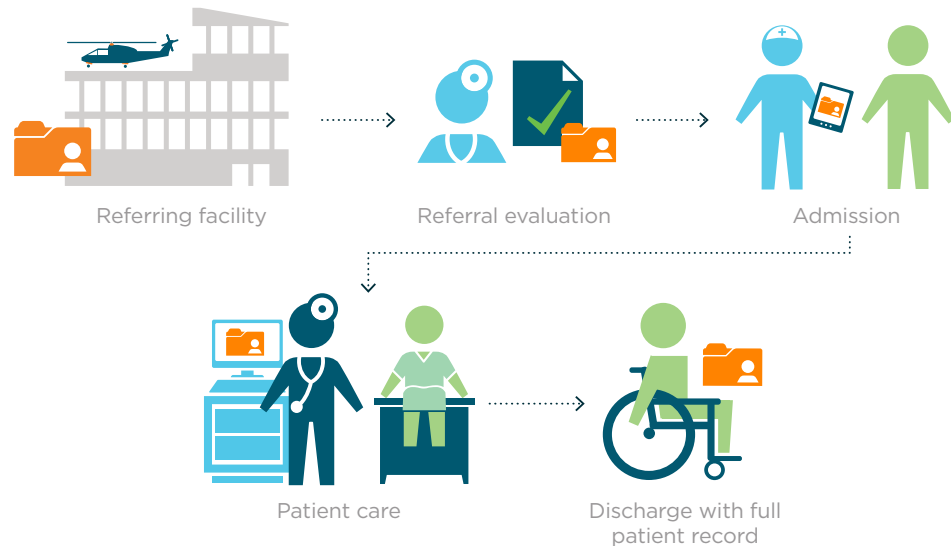

- ✓ Ensures caregivers have the information they need, when and where they need it
- ✓ Extends the value of other IT investments
- ✓ Improves efficiency throughout the healthcare enterprise

Create a more complete electronic patient record with OnBase

As patients transition from one care setting to the next, their records and information must flow with them. Even with a fully implemented electronic medical record (EMR), as much as 80 percent of the patient record resides elsewhere. Not only do your clinicians and staff spend too much time searching for this content, if they fail to locate it, they risk treating patients without having a complete picture.

For more informed decision-making, OnBase by Hyland's enterprise content management (ECM) ensures caregivers have the information they need, when and where they need it, to provide the best possible care.

ACCESS TO PATIENT INFORMATION FROM REFERRAL TO DISCHARGE

Hyland[®]

OnBase works with your post-acute care EMR to provide staff and clinicians fingertip-access to a more complete electronic patient record – from referrals, to patient care and beyond – for superior patient care and service across the continuum of care.

COMPLETE THE PATIENT RECORD

Quick and effective patient care means clinicians and staff need instant access to all of a patient's information - including the unstructured content that resides outside of your EMR. OnBase stores all of your clinical content – from documents, reports and emails to EKGs, wound care photos, X-rays, MRIs and CT scans – in one secure, centralized, electronic repository.

By integrating OnBase with your post-acute-care EMR, your clinicians and staff access this patient-related content from within the system they use most alongside the patient record. This not only reduces time spent searching for patient information, but empowers clinicians to act on the most current, accurate patient information available, reducing errors while speeding decisions.

EXTENDS THE VALUE OF EXISTING IT INVESTMENTS

In addition to the EMR, your staff use several other systems, like AP and HR solutions, on a daily basis. Navigating through multiple systems to locate the information they need to complete their tasks impedes efficiency and creates opportunity for errors.

By offering staff access to content relevant to their task from within their familiar applications, OnBase allows you to take full advantage of the systems you have in place, extending their value. Productivity increases as well - staff stay focused on completing tasks rather than searching through multiple systems for patient information.

IMPROVES EFFICIENCY ACROSS THE ORGANIZATION

A true enterprise solution, OnBase controls content in every part of your healthcare organization. Having immediate access to insurance cards, driver's licenses, EOBs and EDI 835 remittances alongside the patient record expedites the billing cycle as well as decision-making processes in AP and HR. Fingertip-access to information also allows frontline staff to offer first-call resolution for patient inquiries for an improved patient experience.

OnBase goes beyond simply scanning paper and retrieving images. With comprehensive capture technology, document retention and records management solutions, OnBase ingests and manages your content while enforcing your retention policies. Secure storage and role-based access help maintain compliance with regulatory initiatives. User-friendly workflows proactively direct information to the appropriate staff in accordance with your established processes.

From creating a more complete patient record to speeding the billing cycle, OnBase streamlines clinical and administrative processes to support superior patient care while adding value to your existing IT investments.
