

What can enterprise content management do for Health IT for military and government?

All large organizations face the same overarching business challenge: Handling too much paper or unstructured information that causes bottlenecks when trying to process, access or store information. No department is immune to the problem.

There's a lot to keep track of. If a critical piece of information is missing, it's that much more work and takes that much more time to resolve the issue. It's all a million times easier with enterprise content management (ECM). Here's just a few areas where ECM can help you resolve these time stealers, productivity killers and ulcer promoters.

OnBase[®]
by Hyland

One platform **Unlimited potential**

HEALTH INFORMATION MANAGEMENT

OnBase ECM solutions for health information management (HIM) help your organization establish a complete patient record that is immediately available to authorized clinicians and staff. It also helps you close patient charts quickly by automating deficiency management and completion all while complying with HIPAA and The Joint Commission standards with audit trails and a secure, centralized content repository.

ACCOUNTS PAYABLE

With the OnBase accounts payable solution, your AP department achieves faster, more precise invoice processing. No matter how you receive invoices – fax, mail, email, EDI, and so forth – OnBase captures, organizes and delivers those documents, along with supporting content, to the appropriate individuals for review, coding and approval. Accessing and taking action on invoices and supporting documents instantly becomes much simpler with AP automation.

HUMAN RESOURCES

OnBase integrates with your organization's human capital management (HCM) systems, allowing HR staff to retrieve employee documents and data without leaving their familiar user interface. By offering instant access to information via HCM software applications, OnBase minimizes user training requirements and enables HR to provide better service by rapidly responding to employee requests. It also allows personnel to focus on high-value initiatives like employee retention and professional development.

APPEALS AND GRIEVANCES

Satisfaction depends on your ability to track, manage and document every appeal and grievance. The OnBase Appeals & Grievances solution provides a complete approach to this challenge, leveraging OnBase's native case management capabilities, system connectors, letter generation and real-time dashboards to create a self-policing appeals and grievances process.

VENDOR NEUTRAL ARCHIVE (VNA)

OnBase stores all of your clinical content together in a single secure, centralized, electronic repository. Moreover, it stores this data – including documents, reports, non-DICOM content (such as EKGs, scope images, scope videos and wound care photos) and DICOM content (such as X-rays, MRIs and CT scans) – in its native format. There is no wrapping non-DICOM in a DICOM wrapper.

Using the OnBase VNA, organizations can back up their medical images to a safe repository for disaster recovery needs. The OnBase VNA can also help reduce costs by eliminating the need for pricey data migrations in the future. All DICOM studies can be stored in the archive and then served back up to the PACS from which the studies originated.
